Art Unit: 3742

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4,6-8,10-11,13-18,20,21,23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Picard et al (6,359,251).

Note column 13 paragraph 3 in Picard et al which teaches volume control via pressure sensing feedback via volume flow control PFC valve, as acclaimed. Picard et al teach multiple gases as claimed via PFC controllers, as per claim 2.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 3742

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 5,9,12,19,22-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Picard et al, set forth above, in view of DE (20121641). Picard et al teach the claimed subject matter except for showing the claimed pressure sensor locations and the particular gas mixing claimed. The DE patent teaches use of the particular pressure sensors as claimed and figure 1 depicts use of multiple gas sources as claimed and use of the same leads to stable plasma generation. In view of these teachings it would have been obvious to modify the Picard` et al system with pressure transducer and gas mixing as set froth in DE, to effect a more stable plasma generation. Use of differential pressure control as set forth in claim 12 is taught in Picard et al as modified. As per claim 34 secondary gas control is taught in the DE. Patent.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Furujo, Couch, Jr. et al and Bishop et al are cited for teaching pressure and gas flow control schemes in plasma torch systems.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark H. Paschall whose telephone number is 571 272-4784. The examiner can normally be reached on 7am - 3pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR: Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
